

# Plexiglass screens

Thank you for ordering our plexiglass screen. With this screen you offer your employees the opportunity to safely carry out the work. Hereby, you will receive important information about cleaning this screen.

## Maintenance

Due to the high demand and urgency in delivery time, the material is not tempered in the oven. As a result, the plexiglass screens can only be cleaned with water and green soap. Do not use cleaning alcohol or Glassex. If you prefer to use this, you can, of course, but then you take the risk that stress cracks will appear in the sheet from the edge without this affecting the functionality of the sheet.

## Return after use

Plexiglas can be very easily recycled after use. If you no longer need your screen and want to recycle it, you can always return the screen to us. We take care of the recycling of the screens. New plexiglass sheets are produced from this (Greencast®).

In this way, a temporary plastic solution is still a sustainable solution! Contact sales for the possibilities.

Kind regards,

The team of PyraSied
